
[The whole world's LEGO playground](#) [1]

LEGO is known and loved by children and adults throughout the world, thanks to its ingenious simplicity and the endless imaginative possibilities. In the year 2000, LEGO was named Toy of the Century by both Fortune Magazine in the US and the Association of British Toy Dealers. Here are some things you may not know about the world's favourite toy:

It all started with wood

LEGO came into being around 1930, when a Danish carpenter from Billund in Jutland fell on hard times building houses. He supplemented his trade making wooden toys and was so successful that he was soon only making his wooden building blocks. He called the company LEGO, a mix of the Danish words To play and Good. LEGO also means I build in Latin, so it was the perfect name for a perfectly simple toy.

The building blocks of today's LEGO

Carpenter Ole Kirk Christiansen was a visionary man and he was soon importing technology to produce injection-moulded plastics, revolutionising manufacturing and setting the course of LEGO for the next century. Since 1949, LEGO has been made of plastic and continued developments to these seemingly simple building blocks, have kept LEGO a world-leader in toys.

Visiting LEGO

You can read more about their products on the [LEGO website](#). (<http://www....> [2]) Though they don't have regular tours of the factory at Billund, you can arrange for [visits for groups and special guests](#). (<http://aboutus.lego.com/en-us/lego-group/programs-and-visits/> [3])

Legoland

In 1968 the doors opened on [LEGOLAND](#), (insert GuideDK link) the theme park built entirely of LEGO. Located in Billund, the park's favourite attractions include the mini models of famous buildings and sites from around the world. LEGOLAND has itself spread across the world and you can now visit LEGOLANDs in Europe, North America, Asia and the Middle East. But the original at LEGO's home still draws millions of visitors each year.

Other successful Danish toys

[Kay Bojesen](#) was a toy-maker who trained with Georg Jensen. In 1922, he won his first competition for his wooden toys. His most famous pieces remain Danish classics, namely his wooden guards and from 1951, his wooden monkey. Adults collect these items but they are also cherished by children. You can buy Bojesen's toys from [Rosendahl](#). (<http://www.kaybojesen-denmark.dk/> [4])

Another Danish company bringing joy to children around the world through its unique designs is Kompan. (<http://www.kompan.co.uk/> [5]) Children in many countries worldwide enjoy this company's colourful playgrounds, which they've been making since sculptor Tom Lindhardt Wills noticed his

sculptures in urban areas were being climbed on rather than looked at. For 40 years since then, he has devoted his artistic talents to producing sculptural playgrounds through his company, Kompan.
